Description

Health Informatics

Description

Health Informatics research group aims at developing methods and technologies for the acquisition, processing, and study of patient data, which can come from hospital information system or user personalized data from wearable devices / application.

Our Mission

Vision

Improve the health using computation and application based on machine learning method

Mission

- Our application help people achieve more and live better life
- We provide comprehensive health, wellness and fitness solution
- Study about a more personalized and insightful health experience

Health Informatics areas

1. Clinical care
2. Administration of Health Services
3. Medical research
4. Education and Training
5. Mobile apps and new health platform based on wearable device

Clinical Care

Clinical care decision-making or Clinical Decision Support System (CDSS)

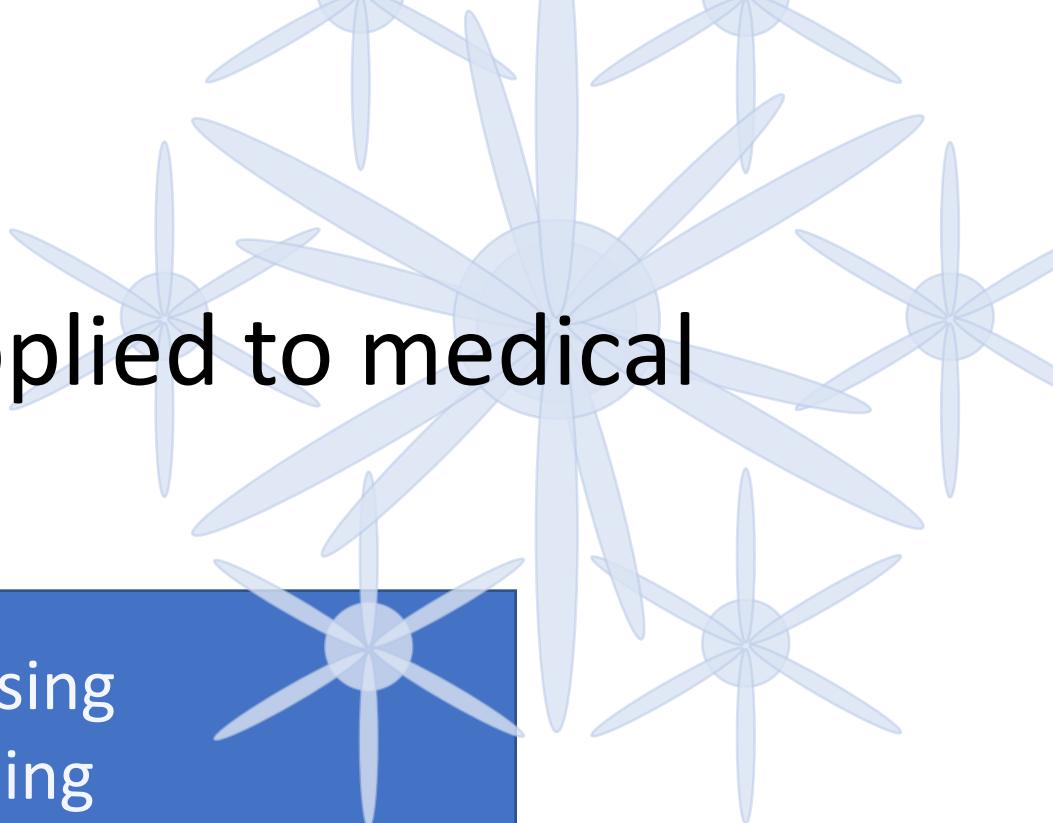

- Information retrieval:
- Alerting systems:
- Reminder
- Suggestion Systems
- Prediction Modelling

Physiological Parameters	3	2	1	0	1	2	3
Respiration Rate (BPM)	≤8		9-11	12-20		21-24	≥25
Oxygen Saturation (%)	≤91	92-93	94-95	≥96			
Any Supplemental Oxygen		Yes		No			
Temperature (°C)	≤35		35.1-36.0	36.1-38.0	38.1-39.0	≥39.1	
Systolic Blood Pressure (mmHg)	≤90	19-100	101-110	111-219			≥220
Heart Rate (BPM)	≤40		41-50	51-90	91-110	111-130	≥131
Level of Consciousness				A			V, P or U

Medical Research

Machine Learning techniques applied to medical research

- Improving stroke diagnosis accuracy using hyperparameter optimized deep learning
- Segmentation stroke objects based on CT scan image using thresholding method
- Detection of Lung Cancer Cell Based on Cytological Examination Using Convolutional Neural Network

Mobile apps and new health platform
based on wearable device

Mobile Health Application

Telemedicine – HealthApp

**New Health Platform based on
wearable Device**

The screenshot shows the "My Application" interface for "Alexander Pierce". On the left, a sidebar lists various menu items: appointment, artikel, catatan medis pasien, hasil pemeriksaan, jadwal, jadwal pemeriksaan, notifikasi, pasien, and pegawai. The main area is titled "Tabel Pasiens" and displays a table with one item:

#	Id Pasien	Nama Pasien	Tanggal Lahir	Alamat	Jenis Kelamin	Username Pasien
1	1	adit	2018-05-04	sddfs	L	adit

The screenshot shows three instances of the "Tiroid App" mobile application. The first instance displays a patient profile for "adam" with a placeholder image and buttons for "TANGGAL" and "AJUKAN APPOINTMENT". The second instance shows detailed patient information: nama: adam, jenis kelamin: laki - laki, usia: 22 tahun, tekanan darah: 100/90, TSH: 1.2, T-4: 0.8, and prediksi: normal. The third instance shows a medical examination record: pemeriksaan darah 2018-05-01.

Mobile health application

PENGEMBANGAN APLIKASI M-HEALTH UNTUK
PERSONAL HEALTHCARE PENDERITA GANGGUAN
TIROID DENGAN PREDIKSI TINGKAT RISIKO
MENGGUNAKAN DECISION TREE

Personalized Health Experience

1 | Mempermudah Diagnosa

Merancang aplikasi perangkat lunak yang akan mempermudah proses diagnosa jenis gangguan penyakit

2 | Mempermudah Akses

Desain perangkat lunak dan distribusi data yang akan memberikan kemudahan pada tenaga medis maupun pasien dalam mengakses data.

3 | Mempermudah Monitoring

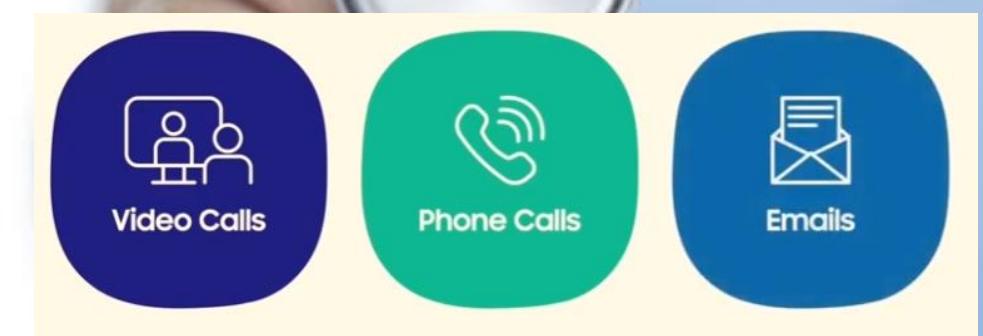

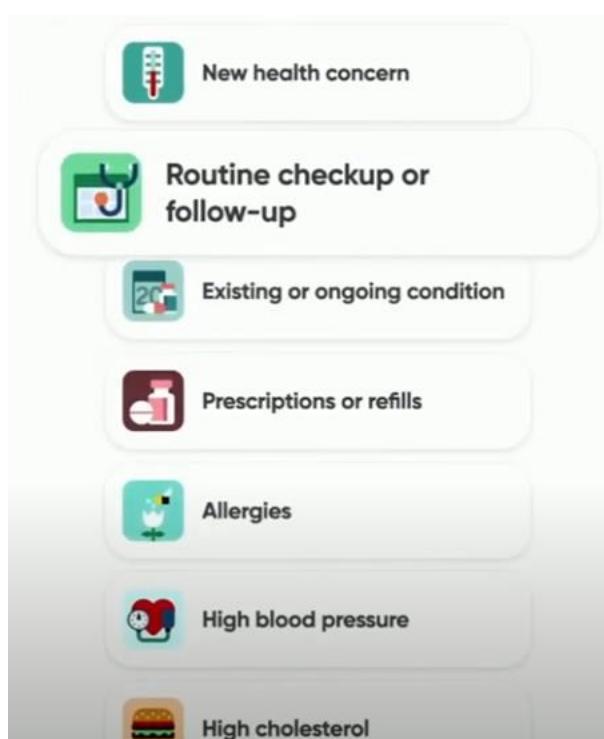

Aplikasi akan mempermudah tenaga medis dalam melakukan pengawasan terhadap perkembangan penyakit

Telemedicine - developing HealthApp

HealthApp

“HealthApp” is medical clinic platform, connecting the doctor and patients

New Health Platform based on wearable Device

Samsung privileged health SDK

Tracking sensor data for On-device data analytics
